

RULE-1: Public Overbilling		0.95 BLOCK
<pre>{ "hospital_code": "QEH", "diagnosis_en": "common cold", "amount_hkd": 3083, "hko_signal": 0 }</pre>	<pre>{ "cpp_flagged": true, "reason": "FLAGGED: QEH public cold >1200", "risk_score": 0.95, "final_flag": true }</pre>	Meaning: HA law broken - Government cold max HKD 800. 3083 impossible. Block immediately.
RULE-2: Typhoon Travel		0.85 CHECK
<pre>{ "hospital_code": "Gleneagles", "diagnosis_en": "common cold", "amount_hkd": 1064, "hko_signal": 9 }</pre>	<pre>{ "cpp_flagged": true, "reason": "FLAGGED: Claim during typhoon", "risk_score": 0.85, "final_flag": true }</pre>	Meaning: T9 MTR stops - No one travels during T9 typhoon. hko signal 9, 85% fake.
RULE-3: Amount Too High		0.75 REVIEW
<pre>{ "hospital_code": "Gleneagles", "diagnosis_en": "common cold", "amount_hkd": 9948, "hko_signal": 0 }</pre>	<pre>{ "cpp_flagged": true, "reason": "FLAGGED: Amount HKD 9948 too high for common cold", "risk_score": 0.75, "final_flag": true }</pre>	Meaning: Private cold max 1800 - 9948 exceeding 75% common review.
RULE-4: ML Anomaly		ML FLAG
<pre>{ "hospital_code": "Gleneagles", "diagnosis_en": "fracture", "amount_hkd": 17102, "hko_signal": 8 }</pre>	<pre>{ "cpp_flagged": false, "reason": "OK: Passed C++ rule engine", "risk_score": 0.05, "final_flag": true }</pre>	Meaning: C++ says fracture=emergency OK in T8, ML catches 17102 outlier (normal 8-12k). Hybrid power.

Interview line: 0.95=law broken block, 0.85=typhoon impossible check, 0.75=too expensive review, ML=unknown pattern learned. |
